AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-29 (cancelled)

30. (Currently Amended) Apparatus for connecting a fitting to a conduit section comprising:

a rigid insert having a generally cylindrical body with a proximal end and a distal end and defining a central lumen, said central lumen extending between said proximal and distal ends, said proximal end being adapted to be received in the conduit section while said distal end projects from the conduit; and

a rigid, one piece retainer, said retainer being generally ring shaped and collar having an opening sufficiently large to receive the insert, the one-piece collarsaid retainer having a sidewall defining a first end facing the distal end of the insert, a second end facing the proximal end of the insert, and an inner surface defining an opening extending from the first end to the second end, said sidewall having a varying thickness such that a diameter of the opening flaring is generally constant from said second end to a position intermediate said first and second ends and then gradually increases from the a-position intermediate the first and second ends toward the first

Reply to Office action of: January 12, 2005

end.

- 31. (Currently Amended) The apparatus of claim 30 wherein the insert <u>body</u> defines a circumferential includes a generally cylindrical body and an annular groove.
- 32. (Currently Amended) The apparatus of claim 30, further comprising wherein the insert includes a generally cylindrical body and an annular groove; and the apparatus includes an annular seal received seated in the circumferential annular groove.
- 33. (Currently Amended) The apparatus of claim 30 wherein energian end of the insert is chamferred.
- 34. (Currently Amended) The apparatus of claim 30 wherein the insert and the one-piece collarretainer are composed of formed from a common the same material.
- 35. (Currently Amended) <u>Apparatus for connecting a fitting to a conduit section comprising:</u>

a rigid insert defining a central lumen; and

a rigid, one piece collar having an opening sufficiently large to receive the insert,
the one-piece collar defining a first end, a second end and an opening extending from
the first end to the second end, the opening flaring from a position intermediate the first

Reply to Office action of: January 12, 2005

and second ends toward the first end. The apparatus of claim 30 including a strap, wherein the insert includes a staple for receiving the strap.

- 36. (Currently Amended) A-The apparatus of claim 33, wherein the rigid insert is adapted to connect for connecting a fitting to a conduit section, an outer surface of the rigid insert body comprising: comprising a body defining a central lumen; a first raised detent; a second raised detent axially spaced from the first raised detent; and a third raised detent between the first and second raised detents, the third raised detent being smaller than the first and second raised detents.
- 37. (Currently Amended) The <u>apparatus of claim 36, wherein the insert body</u> is generally cylindrical in shape and wherein rigid insert of claim 36 wherein the insert includes a generally cylindrical body; and the first, second and third raised detents are annular, raised detents.
- 38. (Currently Amended) The <u>apparatus of claim 37, wherein rigid insert of</u> claim 36 wherein the insert includes a generally cylindrical body; and the first, second and third raised the detents are annular barbs.
- 39. (Currently Amended) The <u>apparatus of claim 36</u>, wherein the first and <u>second rigid insert of claim 36</u> wherein the first and second raised detents are substantially <u>identical to one another the same in size and configuration</u>.

Application No.: 10/602412

Amendment Dated: April 12, 2005

Reply to Office action of: January 12, 2005

- 40. (Currently Amended) The <u>apparatus of claim 36</u>, <u>wherein the insert further comprises rigid insert of claim 36 including a fourth raised detent disposed between the first and second raised detents, <u>wherein</u> the third and fourth raised detents <u>are substantially identical to one another being substantially the same in size and configuration.</u></u>
- 41. (Currently Amended) The <u>apparatus of claim 36</u>, wherein the insert further <u>comprises rigid insert of claim 36</u> including a fourth raised detent and a fifth raised detent; the fifth raised detent being axially spaced from the first and second raised detents; the fourth raised detent being between the fifth raised detent and one of the first and second raised detents; and <u>wherein</u> the fourth raised detent <u>being is</u> smaller than the <u>each of the first</u>, second and fifth raised detents.
- 42. (Currently Amended) The rigid insert of claim 36 including apparatus of claim 36, wherein the insert further comprises a fourth raised detent and a fifth raised detent; the fifth raised detent being axially spaced from the first and second raised detents; the fourth raised detent being between the fifth raised detent and one of the first and second raised detents; the first, second and fifth raised detents being substantially identical to one another the same in size and configuration; and the fourth raised detent being smaller than each of the first, second and fifth raised detents.
- 43. (Currently Amended) The <u>apparatus of claim 36, wherein the insert further</u> comprises rigid insert of claim 36 including a fourth raised detent and a fifth raised

Reply to Office action of: January 12, 2005

detent; the fifth raised detent being axially spaced from the first and second raised detents; the fourth raised detent being between the fifth raised detent and one of the first and second raised detents; and wherein the third and fourth raised detents being are substantially identical to one another the same in size and configuration.

Claims 44-50 (Canceled)

51. (Currently Amended) A coupling apparatus adapted to fluidly couple a first conduit section to a second conduit section, said first conduit section defining a first conduit section lumen and said second conduit section defining a second conduit section lumen, the coupling apparatus Apparatus comprising:

a conduit section defining a conduit section lumen;

a male fitting comprising a first rigid insert and a shell, said first rigid insert having a cylindrical body with a proximal end and a distal end and defining a central lumen, said shell having a proximal end and a distal end, wherein the shell proximal end is affixed to the distal end of said first rigid insert so as to extend integrally therefrom, said first rigid insert being adapted to extend into said first conduit section lumen such that said shell projects from said first conduit section;

a female fitting comprising a second rigid insert and a socket, said second rigid insert having a cylindrical body with a proximal end and a distal end and defining a central lumen, said socket having a proximal end and a distal end, said socket proximal end being affixed to the second rigid insert distal end so as to extend integrally therefrom, said second rigid insert being adapted to extend into said second conduit

Reply to Office action of: January 12, 2005

section lumen such that said socket projects from said first conduit section, said socket being disposed around an exterior surface of said shell so as to receive said shell therein; and,

a rigid insert defining a central lumen and two axially-spaced, raised detents, the rigid insert being affixed to the fitting and extending into the conduit section lumen; and a clamping member disposed around said shell and engaging said socket and serving to sealingly and clampingly secure the male fitting to the female fitting and thereby fluidly couple the first conduit section to the second conduit sectiona rigid, one-piece collar positioned over the conduit section in substantial alignment between the two axially-spaced, raised detents.

- 52. (Currently Amended) The <u>coupling</u> apparatus of claim 51 <u>further</u> comprising first and second retainers, said first retainer being disposed around said first conduit section such that a portion of said first conduit section is clampingly received between said first rigid insert and said first retainer, said second collar member being disposed around said second conduit section such that a portion of said second conduit section is clampingly received between said second rigid insert and said second retainer wherein the one piece collar straddles at least one of the two axially-spaced, raised detents.
- 53. (Currently Amended) The <u>coupling</u> apparatus of claim 51 wherein <u>each</u> body of the <u>first and second inserts</u> insert includes a generally cylindrical body and the <u>two axially spaced</u>, raised detents includes first and second axially spaced apart are

Application No.: 10/602412

Amendment Dated: April 12, 2005

Reply to Office action of: January 12, 2005

annular, raised detents.

- 54. (Currently Amended) The <u>coupling</u> apparatus of claim 51 <u>53</u>, wherein the <u>insert includes a generally cylindrical body and two first and second</u> axially-spaced, annular raised detents are annular barbs.
- 55. (Currently Amended) The <u>coupling</u> apparatus of claim 51 <u>54</u> wherein the <u>annular barbs are substantially identical to one another</u> two axially spaced, raised <u>detents are substantially the same in size and configuration</u>.
- 56. (Currently Amended) The <u>coupling</u> apparatus of claim 51–54, <u>wherein</u> each body of the first and <u>second inserts further includes including</u> a <u>smaller third</u> raised detent between the <u>first and second two axially spaced</u>, <u>raised detents</u>, the <u>smaller third raised detent</u> being smaller than the <u>two axially spaced</u>, <u>raised first and second detents</u>.
- 57. (Currently Amended) The <u>coupling</u> apparatus of claim 51–54, wherein each body of the first and second inserts further includes including a third and fourth raised detents third raised detent and a fourth raised detent; the third raised detent being axially spaced from the <u>first and second two axially spaced</u>, raised detents; the fourth raised detent being between the third raised detent and one of the <u>first and second two axially spaced</u>, <u>[[.]] raised</u> detents; and the fourth raised detent being smaller than <u>any of the first, second and third detents</u> the two axially spaced, raised

58.

Reply to Office action of: January 12, 2005

detents and the third raised detent.

each body of the first and second inserts further includes third and fourth raised detents

(Currently Amended) The coupling apparatus of claim 5154, wherein

including a third raised detent and a fourth raised detent; the third raised detent being

axially spaced from the two axially-spaced, raised-first and second detents; the fourth

raised detent being between the third raised detent and one of the two axially spaced,

raised first and second detents; the first, second, and third two axially spaced, raised

detents and the third raised detent being are substantially the same in size and

configuration identical to one another; and the fourth raised detent being is smaller than

any of the first, second, and third detents the two axially-spaced, raised detents and the

third raised detent.

59. (Currently Amended) The coupling apparatus of claim 5154, wherein

each of the inserts defines a circumferential groove disposed between the first and

second detents, and wherein a seal is disposed in said circumferential groove including

an seal mounted on the insert between the two axially-spaced, raised detents.

60. (Canceled)

61. (Currently Amended) The coupling apparatus of claim 51 wherein the

socket one-piece collar defines a first end, a second end and an opening extending

from the first end to the second end; the opening flares from a position intermediate the

Page 9 of 22

Reply to Office action of: January 12, 2005

proximal and distal ends and thereby defines an annular, inwardly facing groove that receives a seal. first and second ends toward the first end; and the first end faces the fitting.

- 62. (Canceled)
- 63. (Currently Amended) The <u>coupling</u> apparatus of claim 51, <u>further</u> comprising first and second straps including a strap defining strap end portions, wherein the <u>first</u> insert includes insert includes a <u>first</u> staple and the second insert includes a second staple; and wherein the <u>first</u> strap passes through the <u>first</u> staple and is received between the first collar and the first conduit section and the second strap passes through the second staple and is received between the second collar and the second conduit section; and one of the strap end portions engages the one-piece collar.
- 64. (Currently Amended) Apparatus A fitting in combination with a conduit, comprising:

a conduit section defining a conduit section lumen;

a fitting, comprising:

a rigid insert defining a central lumen, the rigid insert being affixed to the fitting and extending into the conduit section lumen;

a coupling portion affixed to the insert and projecting from said conduit section lumen, said coupling portion being adapted to receive a mating coupling portion extending from an associated conduit section; and

Reply to Office action of: January 12, 2005

a rigid, one piece retainer, said retainer being generally ring shaped and cellar having an opening sufficiently large to receive the insert, the one-piece collarsaid retainer having a sidewall defining a first end facing the distal end of the insert, a second end facing the proximal end of the insert, and an inner surface defining an opening extending from the first end to the second end, said sidewall having a varying thickness such that a diameter of the opening flaring is generally constant from said second to a position intermediate said first and second ends and then gradually increases from the a-position intermediate the first and second ends toward the first end.

- 65. (Currently Amended) The <u>combination apparatus</u> of claim 64, <u>further</u> comprising a seal disposed between the insert and the <u>conduit section</u> including an seal mounted on the insert.
- 66. (Currently Amended) The apparatus-combination of claim 64, wherein the rigid insert has a generally cylindrical body, said body defining a circumferential including an annular seal, wherein the insert including a generally cylindrical body and an annular groove disposed between the two axially-spaced, raised detents, and wherein an; and the annular seal is received seated in the annular-circumferential groove.
- 67. (Currently Amended) The apparatus combination of claim 64-66, wherein the retainer is aligned with the seal and cooperates with the insert so as to urge the seal

Application No.: 10/602412

Amendment Dated: April 12, 2005

Reply to Office action of: January 12, 2005

into sealing engagement with the conduit section including an seal mounted on the insert, the one-piece collar being in substantial alignment over the seal.

68. (Currently Amended) Apparatus comprising:

a conduit section defining a conduit section lumen;

a fitting;

a rigid insert defining a central lumen, the rigid insert being affixed to the fitting

and extending into the conduit section lumen;

a rigid, one-piece retainer positioned over the conduit section, the one-piece

retainer defining a first end, a second end and an opening extending from the first end

to the second end, wherein the opening flares from a position intermediate the first and

second ends toward the first end, and the first end faces the fitting; and,

apparatus of claim 64 including a strap defining strap end portions, wherein the insert

includes a staple, the strap passes through the staple, and one of the strap end

portions engages the one-piece collar.

69. (Currently Amended) Apparatus comprising:

a conduit section defining a conduit section lumen;

a fitting;

a rigid insert defining a central lumen, a first raised detent, a second raised

detent axially spaced from the first raised detent and a third raised detent axially

spaced from the first and second raised detents, the rigid insert being affixed to the

fitting and extending into the conduit section lumen;

Page 12 of 22

Reply to Office action of: January 12, 2005

a first retainer positioned over the conduit section, said first retainer being a rigid, one piece annular member and being placed in substantial alignment between the first and second raised detents; and

a second retainer positioned over the conduit section, said second retainer being a rigid, one piece annular member and being in substantial alignment between the second and third raised detents.

70. (original) The apparatus of claim 69 wherein the first retainer straddles at least one of the first and second raised detents.

71. (Canceled)

72. (Currently Amended) Apparatus comprising:

a conduit section defining a conduit section lumen;

a fitting;

a rigid insert defining a central lumen, a first raised detent, a second raised detent axially spaced from the first raised detent and a third raised detent axially spaced from the first and second raised detents, the rigid insert being affixed to the fitting and extending into the conduit section lumen;

a first retainer positioned over the conduit section in substantial alignment between the first and second raised detents; and

a second retainer positioned over the conduit section in substantial alignment between the second and third raised detents;

Reply to Office action of: January 12, 2005

The apparatus of claim 69 wherein the first retainer is a rigid, one-piece collar, the one-piece collar defining wherein the first retainer has a first end, a second end and an opening extending from the first end to the second end, the opening flaring from a position intermediate the first and second ends toward the first end; and the first end of the first retainer faces the fitting.

73. (Canceled)

74. (Currently Amended) The apparatus of claim 69-72 wherein the insert includes a generally cylindrical body; and the first and second raised detents are annular, raised detents.

- 75. (Currently Amended) The apparatus of claim 69-72 wherein the insert includes a generally cylindrical body; and the first and second raised detents are annular barbs.
- 76. (Currently Amended) The apparatus of claim 69-72 including a seal mounted on the insert between the first and second raised detents.
- 77. (Currently Amended) The apparatus of claim 69-72 including an annular seal, wherein the insert includes a generally cylindrical body and an annular groove between the first and second raised detents; and the annular seal is seated in the annular groove.

Reply to Office action of: January 12, 2005

78. (Currently Amended) The apparatus of claim 69-72 wherein the insert defines a fourth raised detent between the first and second raised detents, the fourth raised detent being smaller than the first and second raised detents.

- 79. (Currently Amended) The apparatus of claim 6972 wherein the insert defines a fourth raised detent and a fifth raised detent, the fourth and fifth raised detents being between the first and second raised detents; and the fourth and fifth raised detents being smaller than the first and second raised detents.
- 80. (Currently Amended) The apparatus of claim <u>72</u>69 including a fourth raised detent and a fifth raised detent; the fourth raised detent being between the first and second raised detents; the fifth raised detent being between the second and third raised detents; the first, second and third raised detents being substantially the same in size and configuration; and the fourth and fifth raised detents being smaller than the first, second and fifth raised detents.
- 81. (Currently Amended) The apparatus of claim 69-72 including a fourth raised detent and a fifth raised detent; the fourth raised detent being between the first and second raised detents; the fifth raised detent being between the second and third raised detents; and the third and fourth the fourth and fifth raised detents being smaller than the first, second and third raised detents; and the fourth and fifth raised detents being substantially the same in size and configuration.

Application No.: 10/602412 Amendment Dated: April 12, 2005 Reply to Office action of: January 12, 2005

82. (Currently Amended) Apparatus comprising:

a conduit section defining a conduit section lumen;

a fitting;

a rigid insert defining a central lumen, a first raised detent, a second raised detent axially spaced from the first raised detent and a third raised detent axially spaced from the first and second raised detents, the rigid insert being affixed to the fitting and extending into the conduit section lumen;

a first retainer positioned over the conduit section in substantial alignment between the first and second raised detents;

<u>a second retainer positioned over the conduit section in substantial alignment</u>

<u>between the second and third raised detents; and, The apparatus of claim 69 including</u>

a strap defining strap end portions, wherein the insert includes a staple; the strap

passes through the staple; and one of the strap end portions engages the one of the

first and second retainers.

83. (Canceled)
